CONSUMER TIPS > >

(Information from Bureau of Home Economics, USDA)

1. Use clear warm water; add 4 tablespoons dilute (household) ammonia to one gallon of water.
2. Weak alcohol, vinegar, or ammonia may be added to keep water from freezing in cold climates.
3. Spray water with ammonia in it onto window or mirror with atomizer - to get even film of water on glass and to speed up cleaning and drying.
4. Be careful not to get solution of water and ammonia,
(over)

or water and alcohol on painted, varnished, lacquered surfaces.

5. Use soft, lintless cloths or chamois for drying. Chamois is best; may be used for both washing and drying, but must be rinsed before final polishing.

6. Rubber squeegees save time and labor; buy at 5 & 10 cent stores or hardware stores.

7. If windows are only dusty, they may be cleaned with soft tissue or newspaper.

Save on ammonia costs - buy concentrated liquid ammonia at drug store; use one part of this ammonia to 3 parts of water to get dilute household ammonia.
